required to use OXYTROL safely and effectively.

CONTRAINDICATIONS
Refrain from using OXYTROL if you have the following:

Patient Information

PATIENT INFORMATION

Read this Patient Information before you start using OXYTROL. and each time you get a refill. It highlights important information about OXYTROL that you should know before using it and while you are using it.

What is OXYTROL? OXYTROL is a transdermal system (skin patch) for the treatment of overactive bladder with symptoms of urge urinary incontinence, urgency, and frequency. It delivers the active ingredient oxybutynin, directly into your bloodstream through your skin.

How to use OXYTROL

Before you use OXYTROL, tell your doctor if you: • Have a history of bladder or bowel obstruction

Before you take OXYTROL, tell your doctor if you: • Have kidney problems

What should I tell my doctor before using OXYTROL? Tell your doctor if you have:

How should I use OXYTROL? Use OXYTROL exactly as your doctor tells you to use it.

What are the possible side effects of OXYTROL? OXYTROL may cause serious side effects, including:

What should I avoid while using OXYTROL? Avoid rubbing the patch area during bathing, swimming, or exercising. Bathing and exercising can remove the patch from your skin.

Avoid the patch area while using OXYTROL. This can prevent the patch from sticking to your skin.

What are the possible side effects of OXYTROL? OXYTROL may cause serious side effects, including:

What to do if you miss a dose of OXYTROL

If you miss a dose of OXYTROL, apply the patch as soon as you remember. If it is almost time for your next dose, skip the missed dose and apply the patch at your regular time. Do not double the dose. If you are not sure about what to do, contact your doctor.
How to apply OXYTROL:

1. Before applying OXYTROL, make sure the area is clean and dry. If you are using OXYTROL for the first time, you should apply it 2-3 days before the first bladder leakage episode.

2. The patch is worn on the abdomen, upper thigh, or upper buttock. The directions for use are as follows:

   - Place the bottom of the patch on the area of skin from the most recent patch site. You may find it useful to change the site from one area of skin to another to minimize the irritation that may result from reuse of the same area of skin. Do not cut the patch into smaller pieces or apply more than one patch at a time.

   - The sticky adhesive side of the patch is covered by 2 strips of overlapping protective liner. Remove the outer protective liner before applying the patch. Use the exposed adhesive side of the patch to apply it to the skin. Fold the protective liner over to help keep the patch in place. Avoid touching the sticky side of the patch with your hands.

   - Ensure that the patch is applied to the clean, dry skin. Avoid areas that are already irritated or have skin conditions such as eczema or psoriasis. Do not apply the patch more than once per day and do not reapply the same patch on the same area of skin at any time.

   - After applying the patch, smooth it into place by pressing down firmly with your hands. Then check if the adhesive is still intact. If it is not, do not press it down further. If the patch comes off, reapply it immediately. If you need to reapply the patch, wait at least 12 hours before applying the next patch.

   - After the old patch is removed, fold it in half with the sticky side facing in. Use the sticky side to pick up any remaining adhesive on your hands or clothes. Make sure the sticky side of the patch is not touching your skin or clothing. Then wash your hands with soap and water.

   - After removing the outer protective layer, fold it over and put it in the protective pouch. Do not throw away the protective layer as it could be used to remove any adhesive remaining on your skin. Rinses of adhesive that become dirty may require a mild soap to remove any adhesive that is still on your skin. If you are using OXYTROL for the second or third time, the instructions for use are as follows:

   - When applying OXYTROL for the second or third time, you may use the same area of skin as before but not on the same location.

   - If you find that the patch is not adhering well, it may be due to sweat, body oils, or improper application. In this case, remove the patch and apply a new patch in a different area of skin and continue to follow the instructions for use.

   - If you are experiencing skin irritation or allergic reactions to the patch, discontinue use and contact your healthcare provider.

   - If you forget to change your patch after 3 or 4 days, it may still be effective for up to 1 week after removal. However, it is recommended to follow the instructions for use and not use the patch beyond the recommended time.
